

# Internet intelligence you can use

- **Imagine you urgently needed to monitor all the Internet, all the time – for fraud and phishing, piracy, counterfeiting or brand and trade mark abuse.**
- **Imagine you needed to cover auctions and chat channels, bulletin boards and P2P networks, as well as the world wide web. Imagine the army of researchers you'd need. Imagine the impossible task facing them. Imagine the cost.**
- **Now imagine you had an automated artificial intelligence search system that could do the job for you – thoroughly, relentlessly, tirelessly, ingeniously and very much more cheaply...**

**Imagine this system of yours could scrutinise every part of the online universe, including the deep Internet, out there in the shadows beyond the reach of the search engines. No team of people could ever do that.**

**Your artificial intelligence system would find things you could never find. But then it would discriminate. Imagine it could use intelligent, intuitive, almost human processing to sift the information, so it only brought back the hits you needed to know about.**

**Imagine it was powerful and scalable, too, easy to customise and able to handle any language or alphabet, from Russian to Chinese and Thai.**

**It would capture live data, hour by hour, to give you the hard evidence you need in court. It would even fire off real time alerts to warn you immediately of serious problems.**

**You don't need to imagine. That's what Envisional can offer you. That's the difference you get with our unique A3I – advanced, automated artificial intelligence – systems. That's why Envisional's patented Internet monitoring technology can give you a service even unlimited human resources could never provide, at a cost businesses can readily afford.**

**Automated**

**Artificial Intelligence**

**Envisional is an innovative and businesslike technology company, based on the idea of applying intelligent automation to the task of monitoring the vast, formless universe of the Internet.**

**Since 1999, Envisional has been building on the experience and knowhow of a growing team of artificial intelligence and search software experts.**

**Envisional's unique expertise and patented technology are proved in action on a daily basis, as we help protect our blue chip client list of major brand owners – from global banks and Hollywood movie studios to luxury goods and FMCG companies, software firms and manufacturers.**

**Artificial Intelligence**

Despite its discreet profile, Envisional has become an international authority on counterfeiting, Internet fraud, online brand management and digital piracy.

Behind the technology stands the expertise and business knowledge of a team of dedicated analysts. Their intimate understanding of today's ever-changing online threats can help you secure your assets, anticipate problems and get an early glimpse of new business opportunities.

The selective, concise reports derived from Envisional's monitoring of the online universe provide Internet intelligence you can use in practical ways – to fend off phishing attacks and financial frauds, protect your products and trademarks or thwart movie and music piracy.

**Automated**

**Artificial Intelligence**

**The flexible, programmable nature of Envisional's A3I technology allows clients to specify exactly what they are looking for. Though we have created domain-specific intelligent agents and customised analysis tools for a range of business needs, there is unlimited potential for new applications.**

**Ultimately, this is a new technology that can be used to find any content from any online source to meet any need.**

**It is also embeddable in other systems, opening the door for OEM deals with suitable partners who can see Envisional's technology adding new dimensions to their own businesses and applications.**
